

Gyros, Clocks, Interferometers.: Testing Relativistic Gravity in Space

Filesize: 7.29 MB

Reviews

It is in a single of the most popular ebook. It really is simplified but excitement in the fifty percent from the pdf. It is extremely difficult to leave it before concluding, once you begin to read the book.
(Joy Langosh)

GYROS, CLOCKS, INTERFEROMETERS.: TESTING RELATIVISTIC GRAVITY IN SPACE

Book Condition: New. Publisher/Verlag: Springer, Berlin | Many new tests of gravity and, in particular, of Einstein's general relativity theory will be carried out in the near future: The Lense-Thirring effect and the equivalence principle will be tested in space; moreover, gravitational waves will be detected, and new atomic interferometers and clocks will be built for measurements in gravitational and inertial fields. New high-precision devices have made these experiments feasible. They will contribute to a better understanding of gravitational physics. Both experimental developments and the theoretical concepts are collected in this volume. Exhaustive reviews give an overall insight into the subject of experimental gravitation. | Overview.- An Overview of Solar System Gravitational Physics: The Theory-Experiment Interface.- Determination of the Gravitational Constant.- The Lense-Thirring Effect.- The Lense-Thirring Effect: From the Basic Notions to the Observed Effects.- Gravity Probe B: Countdown to Launch.- Gravitomagnetism and the Clock Effect.- Spinning Relativistic Particles in External Fields.- Detection of Gravitational Waves.- The GEO 600 Gravitational Wave Detector Status, Research, Development.- Gravitational Radiation Theory and Light Propagation.- Relic Gravitational Waves and Their Detection.- The Equivalence Principle.- Principles of Equivalence: Their Role in Gravitation Physics and Experiments That Test Them.- STEP: A Status Report.- High Sensitive DC SQUID Based Position Detectors for Application in Gravitational Experiments at the Drop Tower Bremen.- Space Accelerometers: Present Status.- Searching for Extra Dimensions and New String-Inspired Forces in the Casimir Regime.- Relativistic Effects in the Motion of the Moon.- Lunar Laser Ranging - A Comprehensive Probe of the Post-Newtonian Long Range Interaction.- Testing Relativistic Gravity and Measuring Solar System Parameters via Optical Space Missions.- Clocks and Rods.- Clocks for Length and Time Measurement.- SpaceTime Mission: Clock Test of Relativity at Four Solar Radii.- Pulsar Timing - Strong Gravity Clock Experiments.- Quantum Tests of General Relativity.- Relativistic Phase Shifts for Dirac Particles Interacting with...
