RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 100 pages. Dimensions: 9.7in. x 7.4in. x 0.2in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1909 Excerpt: . . . been extensively used by surgeons, as a hand disinfectant in preparation for operating. After preliminary scrubbing of the hands and nails with soap and water, they are immersed in a saturated aqueous solution of the permanganate. This is followed by a solution of oxalic acid which removes the stain of the permanganate. When used as a mouth wash, 1: 1000 is a proper dilution. Its use within a carious cavity is always to be avoided; other agents are just as efficient, without the objectionable staining quality. As an application to the throat in diphtheria or tonsillar infection, and to foul ulcers, it possesses considerable value. In 1 per cent, solution it has been found to destroy developed bacteria and in 1: 1000 it prevents their development. It is an efficient chemical antidote to morphine if given while the latter is still in the stomach. Incompatibility. With organic substances, or triturated with sulphur or other inflammable substances, explosion may occur. With carbolic acid oxidation occurs. Alcohol decomposes it. This drug should be used alone in a simple aqueous solution. Sodii Sulphis. Sulphite Of Sodium $\text{Na}_2\text{SO}_3 \cdot 7\text{H}_2\text{O}$. Exposed to the air this salt is efflorescent and gradually oxidizes to sulphate. It is soluble in 2 parts of water, the solution being either neutral or feebly alkaline; slightly soluble in alcohol. It may be used as a bleaching agent, acting by the abstraction of oxygen from the coloring matter. (See under Bleaching Agents.) Bruntons Pharmacology, 1885, p. 96....
