Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1904 Excerpt: .lines are fainter, and many of them have companions. The region from A 4800 to A 5600 of the iron spectrum was photographed with three prisms. It was found that there were several lines in this region which had no companions, and which could be used without hesitation. Close double lines were assumed to have positions depending upon the relative intensities of their components. The plates were measured with one of the measuring microscopes in use for the regular line of sight work. Each plate was measured with both violet left and violet right in the eye piece. A plate of the sky was taken with a very long slit and the amount of the curvature of the comparison lines was determined in the same manner as by Campbell. The curvature corrections were found to be insignificant. June JO July so Aug. 19 Sept it Oct 21 Nov It Pec. n J-x. it fefer. is Mar. t i101 i401 thing of interest was found on all other plates, except 57 A. The brightness of the star at the time when each plate was taken is shown in Figure 1. The observations of visual magnitude are given at the end of this paper. As the plates are well distributed along the light curve until about the time of the minimum, no great change in the spectrum could have escaped observation. Absorption Spectrum. As is well known, oCeti and the other long-period variables have absorption spectra of Secchi...
